

SAKETH VISHWANATHAM

Cloud (GCP) & DevOps Engineer

Hyderabad, India | +91 8885085188 | sakethvishwanatham@gmail.com
linkedin.com/in/sakethvishwanatham | github.com/saketh1809

PROFESSIONAL SUMMARY

Cloud & DevOps Engineer with hands-on experience in Google Cloud Platform (Cloud Build, Cloud Run, GKE) and working knowledge of AWS (EC2, ECR, EKS), building CI/CD pipelines (Jenkins, GitLab CI/CD), working with Docker and Kubernetes for containerized applications, and Terraform for infrastructure-as-code. Currently at Capgemini, supporting a client engagement involving Google Cloud (BigQuery), Docker, and Terraform. HashiCorp Certified Terraform Associate. Background in IoT and embedded systems engineering, with a track record of winning 6+ hackathons and technical competitions.

TECHNICAL SKILLS

Cloud Platforms: Google Cloud Platform (Cloud Build, Cloud Run, GKE, BigQuery basics) — primary; AWS (EC2, ECR, EKS) — working knowledge

DevOps & IaC: Docker, Docker Compose, Kubernetes, Terraform (HashiCorp Certified), Jenkins, GitLab CI/CD, CI/CD Pipelines

Programming Languages: Python, Java, C, SQL

Databases: MongoDB, SQLite

Web Technologies: Flask, HTML, CSS, JavaScript

Tools & Platforms: Git/GitHub, Arduino, Raspberry Pi, Eagle

PROFESSIONAL EXPERIENCE

Senior Software Engineer | Capgemini, Pune, India

Sep 2025 – Present

- Completed an intensive DevOps training program covering Python, Infrastructure as Code with Terraform, and container orchestration with Docker and Kubernetes.
- Currently supporting a client engagement, working hands-on with Google Cloud BigQuery, Docker, and Terraform for cloud infrastructure tasks.
- Building and maintaining CI/CD pipelines using GitLab CI/CD to automate build and deployment workflows.
- Collaborated within cross-functional teams to design scalable, containerized deployment workflows during DevOps training.

Supply Chain Researcher | Unistring Tech Solutions

Feb 2025 – Jun 2025

- Analyzed technical requirements for system design and integration, identifying and specifying modules and components for subsystem and full-system architectures.
- Collaborated with cross-functional teams to ensure seamless integration from concept through execution.

Project Intern | SWAN Lab, IIT Kharagpur

Aug 2024 – Sep 2024

- Integrated sensors with ESP32 and implemented MQTT/SMQTT protocols for an industrial live project commissioned by TATA Steel, Jamshedpur.
- Presented sensor data on AWS for real-time analysis and built a Raspberry Pi gateway with SQLite for local data storage.
- Contributed to PCB design for the sensor gateway hardware.

Product Development Intern | KLVIN.AI

Nov 2023 – May 2024

- Developed an IoT device to monitor electric motor health by interfacing sensors with a Raspberry Pi.
- Built a Flask-based web server and SQLite database to receive and store sensor data, gaining hands-on experience with IoT architecture and Git-based version control.

Research Intern | Speech Processing Lab, IIIT Hyderabad

May 2023 – Jul 2023

- Worked with stutter speech datasets to identify stutters in speech signals using MFCC feature extraction, neural networks, and clustering methods.
- Built a speaker recognition model and a speaker diarization model.

CLOUD & DEVOPS PROJECTS

Stock-Market-Dashboard

- Built and deployed a stock market dashboard supporting user login, financial news, stock tracking, and personalized watchlists.
- Containerized the application with Docker and configured Docker Compose for multi-service deployment.
- Integrated MongoDB as the backend for user credentials, stock data, and watchlist entries.
- Deployed the application on Google Cloud using Cloud Build → Cloud Run for automated, fully managed hosting.
- Implemented a Kubernetes deployment on GKE for scalable, cloud-ready orchestration.

Environment: Docker, Docker Compose, MongoDB, HTML/CSS, JavaScript, Python (Flask), Google Cloud Run, Cloud Build, GKE

Tracking-System-Application

- Deployed a real-time shipment tracking application for customers, logistics teams, and administrators, fully containerized with Docker and orchestrated with Kubernetes on AWS EC2.
- Built Jenkins CI/CD pipelines automating code checkout, Docker image builds, and deployment workflows triggered by GitHub pushes.
- Provisioned AWS infrastructure — EC2 instances, networking components, and EKS clusters — using Terraform.
- Pushed container images to AWS ECR and DockerHub and deployed them to EKS via Kubernetes manifests.
- Integrated MongoDB as a pod/service to store user data, login credentials, cart details, and shipment records.

Environment: Docker, Jenkins, Kubernetes (EKS), Terraform, AWS EC2/ECR, GitHub, MongoDB

ADDITIONAL PROJECTS

Real-Time Tsunami Warning System Using Wave Buoys

- Built a wave-buoy monitoring system using HW290/GY87 sensors and SX1278 LoRa modules for long-range wave data transmission to a SiWx917 gateway.
- Relayed sensor data to an AWS EC2 instance via MQTT and stored it in SQLite; implemented a machine learning model to predict tsunami events with real-time web alerts.

Smart Crop Monitoring System with Raspberry Pi

- Built an IoT crop-monitoring system addressing intrusion detection (camera + laser security), inadequate lighting (LDR + LED), and soil moisture (capacitive sensor + automated pump), powered by solar panel.

Air Quality Monitoring and Purification System

- Led a 2-person team building an air quality dashboard using MQ135, DHT11, and GP2Y1014 sensors, with automated HEPA/activated-carbon/UV filtration triggered by poor air quality readings.

Smart Attendance System Using Raspberry Pi

- Built a Raspberry Pi 3B+ face-recognition attendance system with biometric verification for access control.

Wi-Fi Controlled Surveillance Robot

- Built a Wi-Fi-controlled surveillance robot using an ESP32-CAM module and L298 motor driver for remote-vision navigation in hard-to-reach spaces.

EDUCATION

B.Tech, Electronics and Communication Engineering

2021 – 2025

VNR Vignana Jyothi Institute of Engineering and Technology (JNTUH) — GPA: 7.46

CERTIFICATIONS

- HashiCorp Certified: Terraform Associate (004)
- Introduction to Internet of Things — NPTEL (Top 5% of participants)
- Introduction to Industry 4.0 And Industrial Internet of Things — NPTEL
- Wireless Ad Hoc and Sensor Networks — NPTEL
- Introduction to Internet of Things — Cisco Networking Academy
- PCB Design and Application Development — Workshop, VNRVJIET ECE Dept.
- Drone Simulation and Assembling — Workshop, VNRVJIET ECE Dept. with Pavaman Aviation

ACHIEVEMENTS

- Won 1st place among 30 teams at Convergence2K23 (VNR VJIET) for “Air Quality Monitor and Its Purification.”
- Won 1st place at Project Expo MICROCOSM (MGIT) for “Smart Attendance Using Raspberry Pi.”
- Won 1st place at INNO-VA-THON, VNR VJIET (organized by ISOI and IEEE RAS student chapter).
- Won 1st place, Hardware Hackathon, Convergence 2k23R (VNR VJIET) for “Smart Monitoring of Crops.”
- Won 1st place, Techathon, HAVANA’24 (GITAM) for “Smart Monitoring of Crops Using Raspberry Pi.”
- Won 2nd place, HACKWAVE hackathon (SNIST).
- Placed in top 5% of NPTEL “Introduction to Internet of Things” certification cohort.
